Overview

**Install required
software**

**Set up the
database**

**Connect to the
database via the
Importer/Exporter**

**Add additional
database schemas
(Optional)**

**Install ADE plug-ins
(Optional)**

Overview

**Install required
software**

**Set up the
database**

**Connect to the
database via the
Importer/Exporter**

**Add additional
database schemas
(Optional)**

**Install ADE plug-ins
(Optional)**

Software requirements

Software required
Software install
Database setup
Further resources

- **Java 11 JDK**
 - <https://www.oracle.com/java/technologies/javase/jdk11-archive-downloads.html>
- **PostgreSQL (e.g. v. 12.x) + PostGIS (e.g. v. 3.x) + PgAdmin 4 (e.g. v. 6.x)**
 - <https://www.postgresql.org/download/>
 - <https://postgis.net/install/> (generally already installed with PostgreSQL)
 - <https://www.pgadmin.org/download/> (generally already installed with PostgreSQL)
- **CityGML 3D City Database Suite**
 - <https://github.com/3dcitydb/3dcitydb-suite/releases>
- **Google Earth Pro** (optional, only if you want to export to kml/Collada)
 - <https://www.google.com/earth/versions/#download-pro>
- **NodeJS** (optional, needed only if you want to use the Web-map-client)
 - <https://nodejs.org/en/>

Software installation order

Software required
Software install
Database setup
Further resources

- 1) Install Java (if not yet installed)

- 2) Install PostgreSQL
 - Install PostGIS (generally installed together with PostgreSQL, see next slides)
 - Install PgAdmin (generally installed together with PostgreSQL, see next slides)

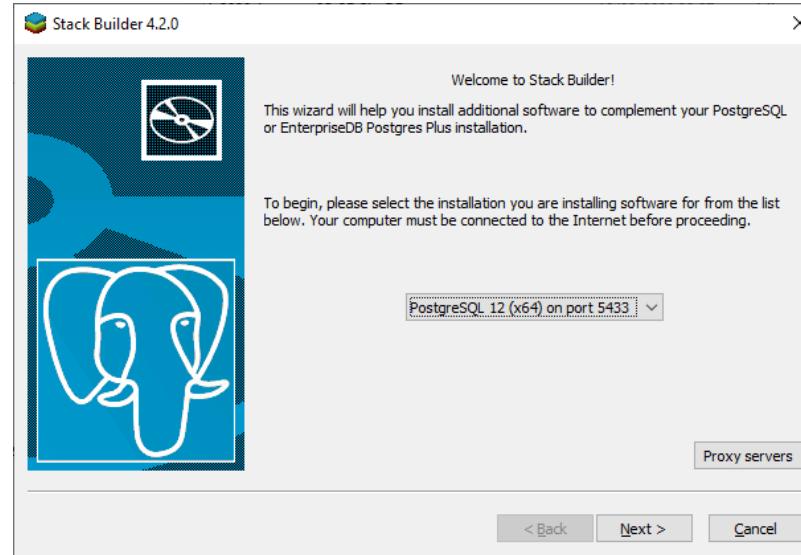

- 3) Install the 3DCityDB suite
 - Execute the .jar file, it will start the installation process

- 4) Install Google Earth (optional)

- 5) Install NodeJS (optional)

PostgreSQL

- **RECOMMENDED:** Install PostgreSQL on your computer using the automatic installer (Stack builder).

- Please take care to:
 - Properly set a **password** for your ***postgres* user**. The *postgres* user is the administrator of the PostgreSQL database cluster. Do not lose the password!!
 - You can generally set the default ***port*** of PostgreSQL to **5432**.

PgAdmin / PostGIS

- PGAdmin4 is generally installed by default, no need to do anything
- The Stack builder application allows you to install also other applications, such as PostGIS and (optionally) a webserver (here: PEM)

Software required
Software install

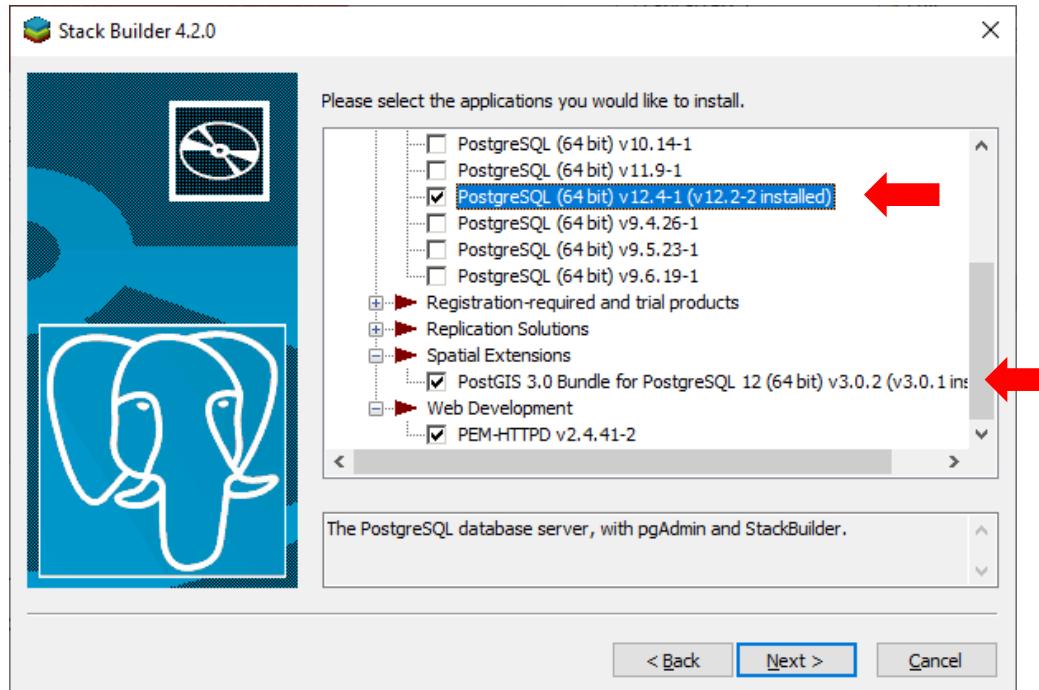

- Java
- PostgreSQL
- PgAdmin/PostGIS
- 3DCityDB
- Google Earth
- NodeJS

Database setup

Imp/Exp connection

Additional schemas

ADE plug-ins

Software required

Software install

- Java
- PostgreSQL
- PgAdmin/PostGIS
- **3DCityDB**
- Google Earth
- NodeJS

Database setup

Imp/Exp connection

Additional schemas

ADE plug-ins

3DCityDB

NOTA BENE: The detailed installation guide can be found here:

<https://3dcitydb-docs.readthedocs.io/en/latest/>

In the following slides, only the main points are presented

1) Install the **3D City Database Suite**

- If you want to install it in the program files directory (e.g. C:\Program Files\3DCityDB-Importer-Exporter) you must make that directory writable by everybody (i.e. not only by the administrator!)
- Alternatively, you can install the 3DcityDB in any other directory where you have writing privileges
- At the end, you should have the icon of the Importer/Exporter on your desktop (or start menu)

2) Launch the Importer/Exporter just to test whether it starts correctly

Overview

**Install required
software**

**Set up the
database**

**Connect to the
database via the
Importer/Exporter**

**Add additional
database schemas
(Optional)**

**Install ADE plug-ins
(Optional)**

Database setup

Procedure overview

Software required
Software install
Database setup
Imp/Exp connection
Additional schemas
ADE plug-ins

- 1) In PostgreSQL (via the PgAdmin GUI)
 - Connect to the PostgreSQL server
 - Create a new empty database that will contain your 3D city model data
 - Add the extensions for PostGIS, PostGIS-raster, etc.
 - See the next slides for details
- 2) From the 3DCityDB installation folder
 - Edit the CONNECTION_DETAILS.bat file and run the CREATEDB script to create the tables (and other objects) in the database you have created in the previous step
 - See the next slides for details
- 3) Connect to the database (e.g. via PgAdmin) just to check that you created the tables
- 4) Connect to the database from the 3DCityDB Importer/Exporter

Connecting to the database

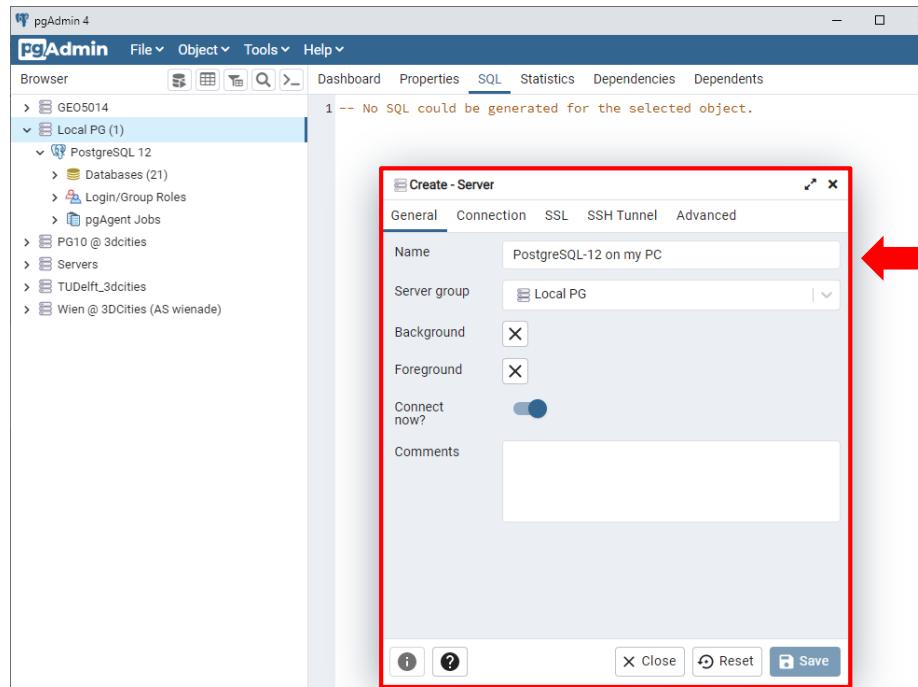

- AFTER you have successfully installed PostgreSQL, you can access the database server via PgAdmin

ALTERNATIVELY

- You do not have PostgreSQL installed on your own computer, but you know the connection parameters to connect to a remote server
- In both cases, you will need information about:
 - Server name or IP address ("localhost" if it is on your computer)
 - Database name (generally "postgres" if it is on your computer)
 - Port (generally 5432 if it is on your computer)
 - Username, Password (e.g. the ones created before if it is on your computer)

Connecting to the database from PgAdmin

- Create a (link to the) database server
 - You are actually creating a connection to the database server from PgAdmin
 - Click on menu Object\Create\Server **OR** right mouse-click\Create\Server and fill out the fields
 - **Please note:** this step may not be required if you already have a server connection established

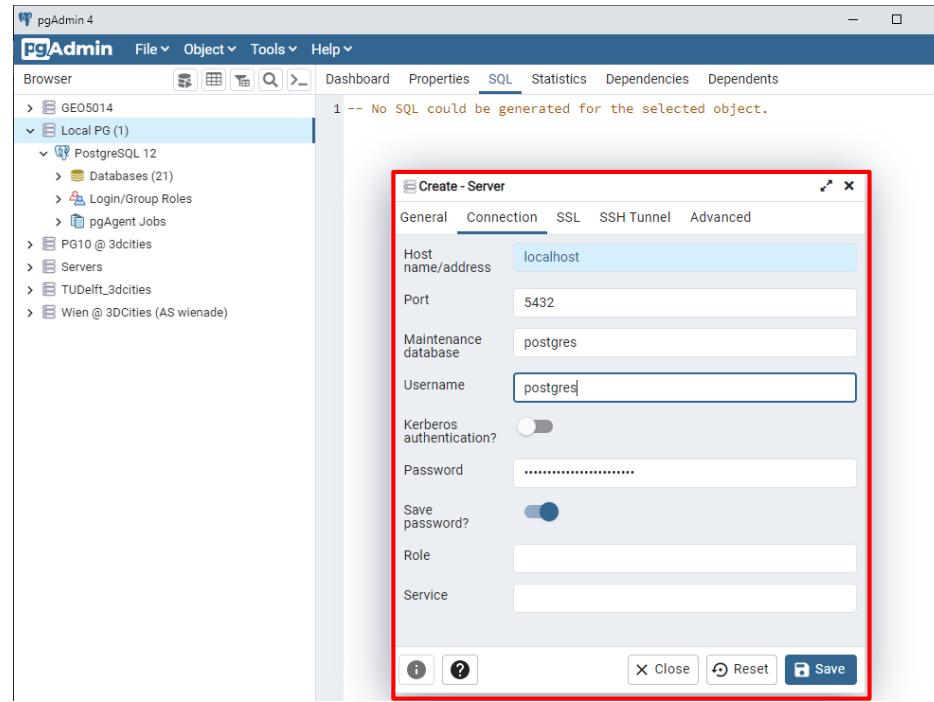

In the "General" tab, you simply add a name to identify your connection

Here, FOR EXAMPLE, the string is "PostgreSQL-12 on my PC"

Connecting to the database from PgAdmin

- Create a (link to the) database server
 - You are actually creating a connection to the database server from PgAdmin
 - Click on menu Object\Create\Server **OR** right mouse-click\Create\Server and fill out the fields
 - **Please note:** this step may not be required if you already have a server connection established

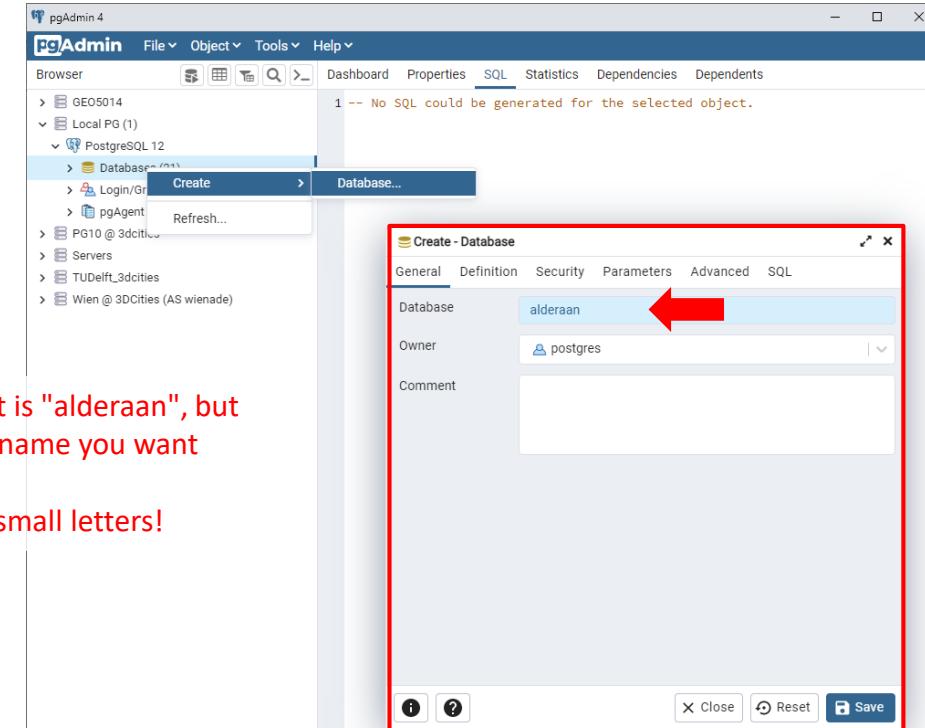

In the "Connection" tab, you add the connection parameters

- Host name / IP address
- Port
- Database name
- Username
- Password

Database creation

- Once you have created a connection, you can create the database that will contain your city mode data
 - Click on menu Object\Create\Database **OR** right mouse-click\Create\Database and fill out the fields
 - Choose the name you want, ideally the name of the city

Here, **for example**, it is "alderaan", but you can choose any name you want

Best if you use only small letters!

Database creation

Software required
Software install

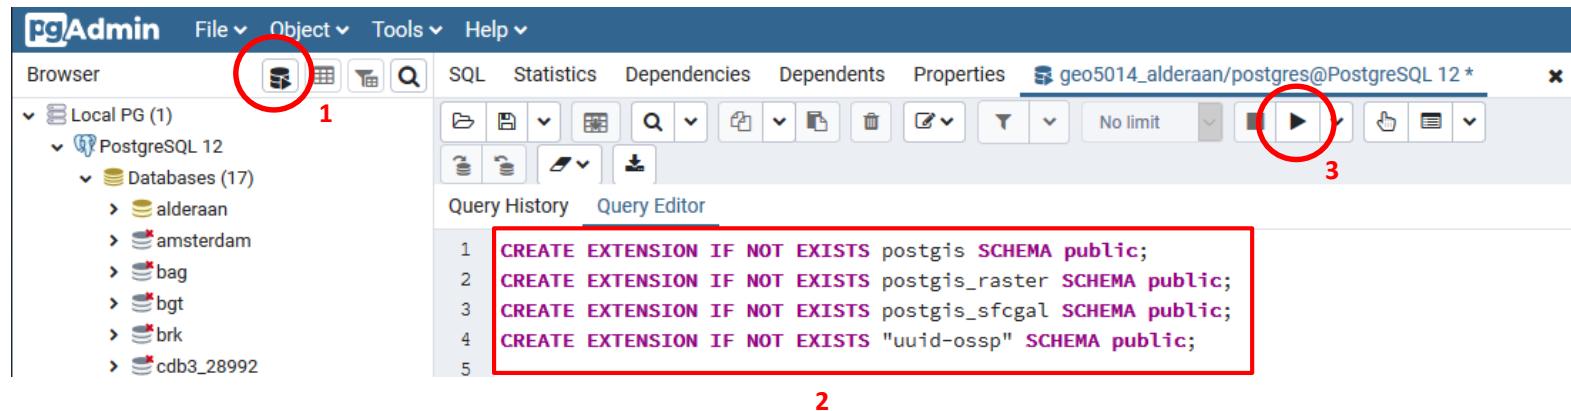

Database setup

- Database connection
- **Database creation**
- Create tables etc.
- Check via PgAdmin

Imp/Exp connection

Additional schemas

ADE plug-ins

Add PostGIS (and other extensions) to the database you have just created

- 1) Open a SQL query window
- 2) Copy and paste the text written in the yellow box into the query window
- 3) Run the query

```

CREATE EXTENSION IF NOT EXISTS postgis SCHEMA public;
CREATE EXTENSION IF NOT EXISTS postgis_raster SCHEMA public;
CREATE EXTENSION IF NOT EXISTS postgis_sfsgal SCHEMA public;
CREATE EXTENSION IF NOT EXISTS "uuid-ossp" SCHEMA public;

```

Software required
Software install

Database setup

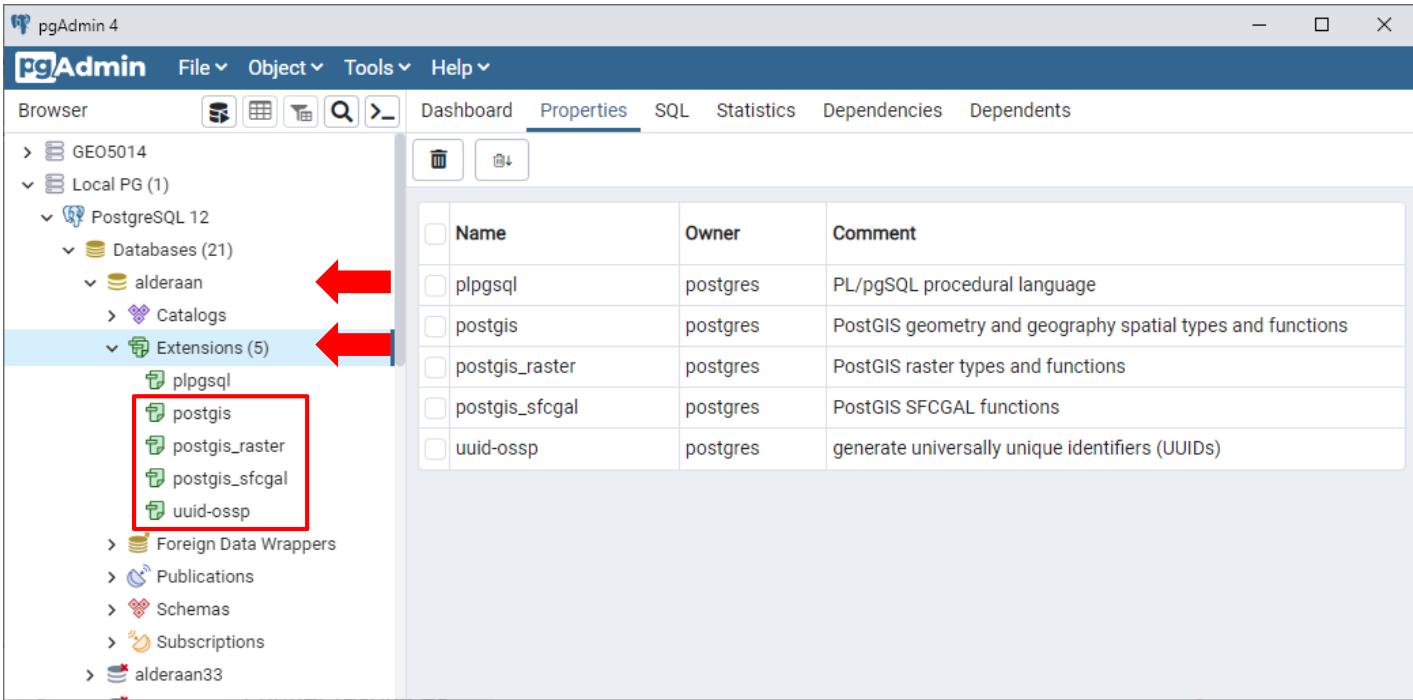

- Database connection
- **Database creation**
- Create tables etc.
- Check via PgAdmin

Imp/Exp connection

Additional schemas
ADE plug-ins

Database creation

- Check that you have correctly installed the extensions in your database
 - Open "Extensions" item in your database (e.g. "alderaan")
 - Check that the extensions are listed there (the "plpgsql" one is installed by default)

The screenshot shows the pgAdmin 4 interface. The left sidebar displays a database tree with nodes for 'GEO5014', 'Local PG (1)', 'PostgreSQL 12', 'Databases (21)', 'alderaan', 'Catalogs', and 'Extensions (5)'. The 'Extensions (5)' node is highlighted with a red box. A red arrow points to this node. The main panel has tabs for 'Properties', 'SQL', 'Statistics', 'Dependencies', and 'Dependents'. The 'Properties' tab is selected. A table lists extensions with columns for Name, Owner, and Comment. The table shows the following data:

Name	Owner	Comment
plpgsql	postgres	PL/pgSQL procedural language
postgis	postgres	PostGIS geometry and geography spatial types and functions
postgis_raster	postgres	PostGIS raster types and functions
postgis_sfcgal	postgres	PostGIS SFCGAL functions
uuid-ossp	postgres	generate universally unique identifiers (UUIDs)

A red arrow points to the 'plpgsql' row in the table, highlighting it. The 'plpgsql' entry is also highlighted with a red box in the tree view.

Create tables and other database objects

NOTA BENE: The detailed installation guide can be found here:

<https://3dcitydb-docs.readthedocs.io/en/latest/first-steps/index.html>

In the following slides, only the main points are presented

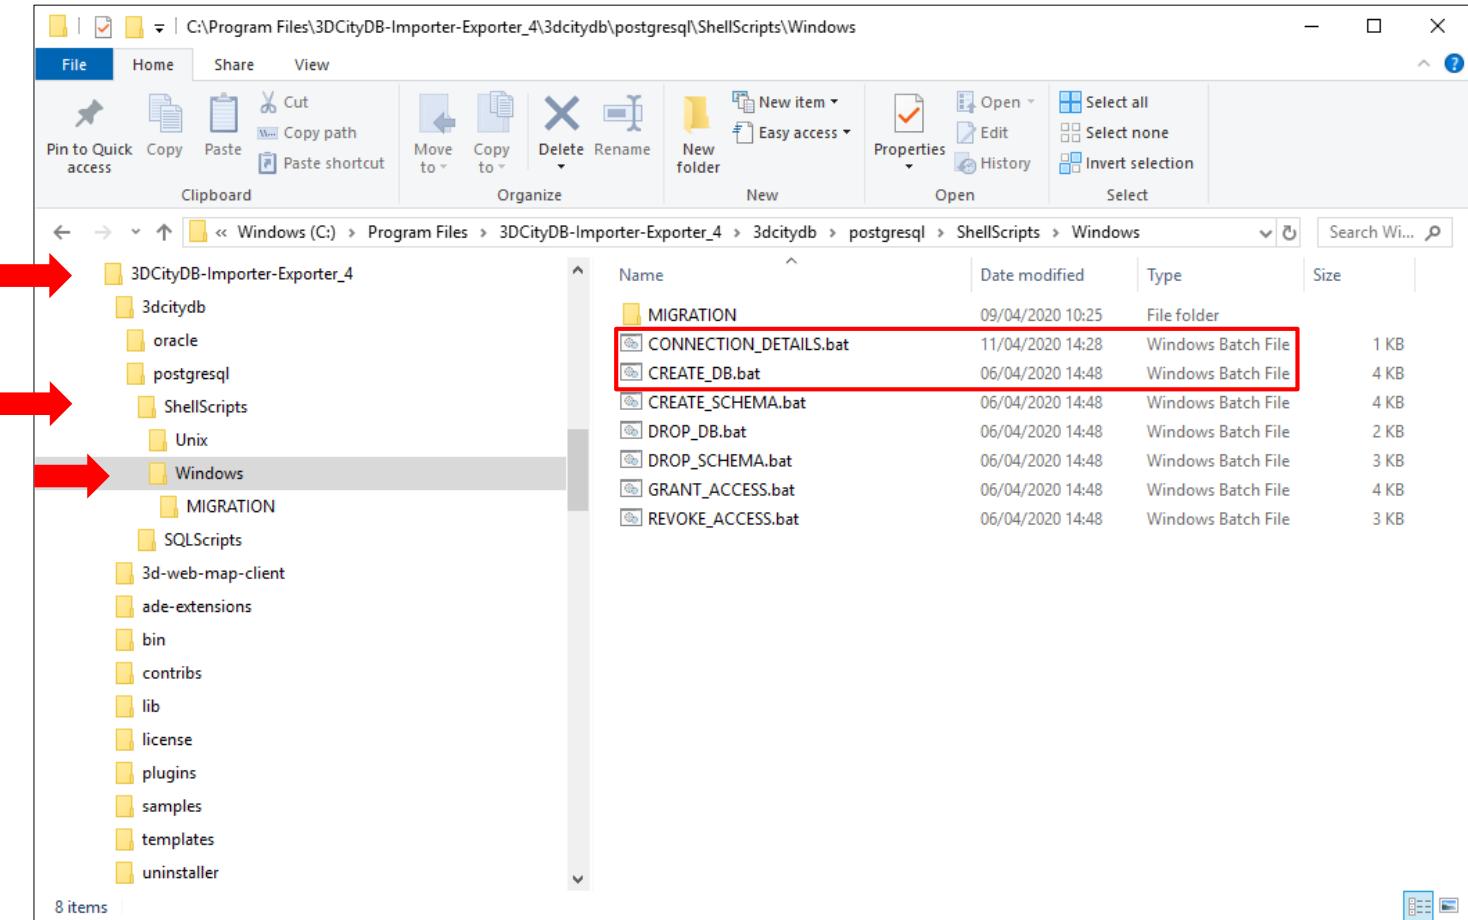

- Go to the **3DCityDB installation folder** and look for the 3dcitydb\postgresql\ShellScrips directory. It should look like in the next slides
 - Open the CONNECTION_DETAILS.bat file in a text editor and insert your PostgreSQL connection details
 - Run the CREATEDB script (for Windows and Unix in the corresponding subfolders)

Create tables and other database objects

Software required
Software install

Database setup

- Database connection
 - Database creation
 - **Create tables etc.**
 - Check via PgAdmin
- Imp/Exp connection
Additional schemas
ADE plug-ins

Create tables and other database objects

Software required

Software install

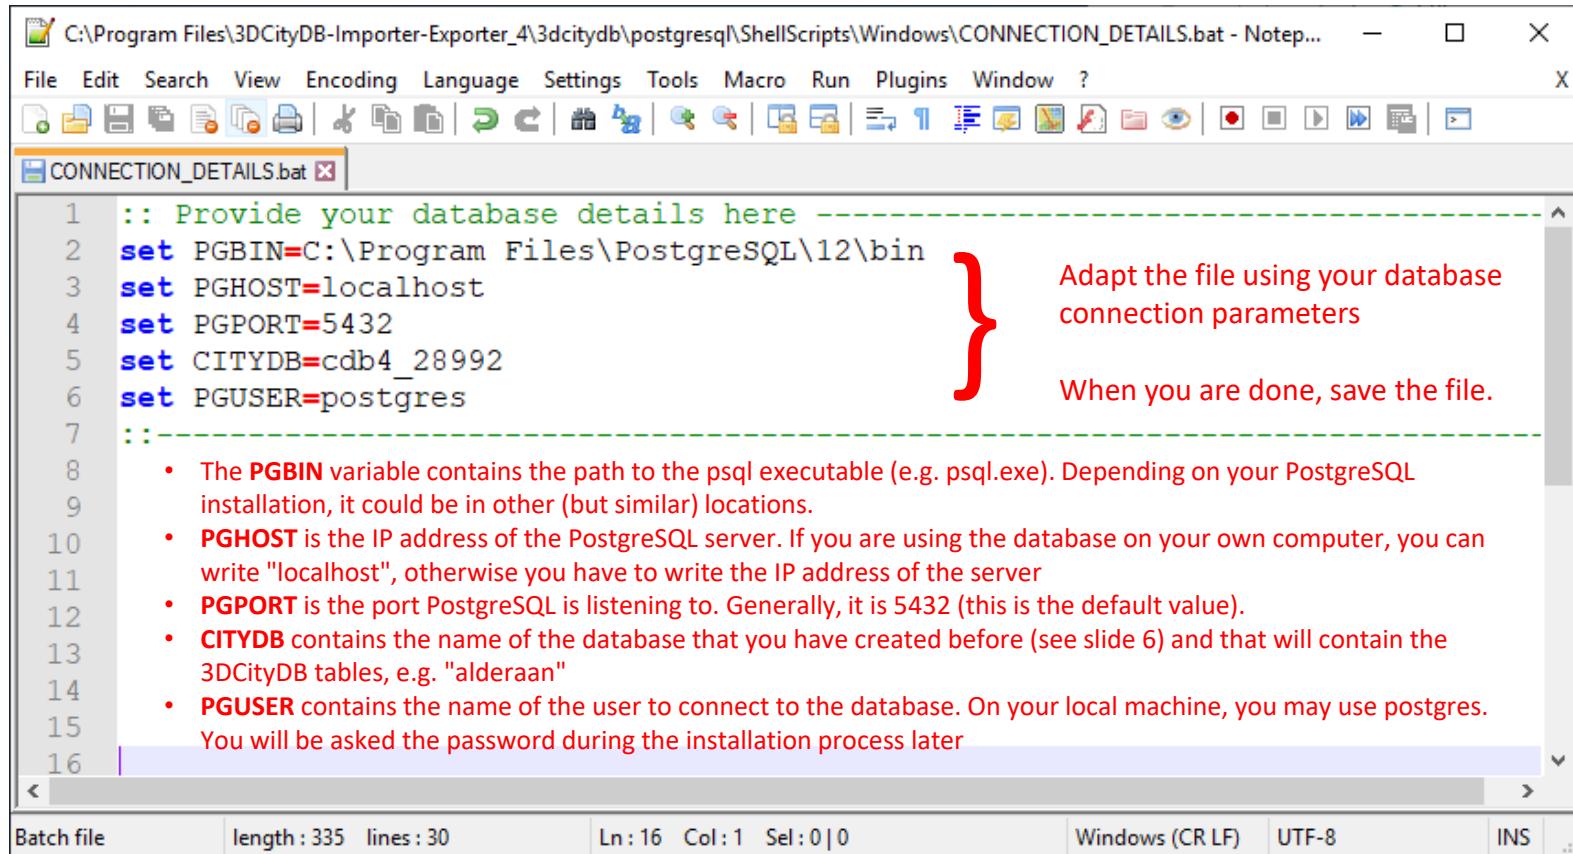

Database setup

- Database connection
- Database creation
- **Create tables etc.**
- Check via PgAdmin

Imp/Exp connection

Additional schemas

ADE plug-ins

The screenshot shows a Windows Notepad window titled "CONNECTION_DETAILS.bat". The file contains a batch script with several environment variable assignments:

```
1 :: Provide your database details here -----
2 set PGBIN=C:\Program Files\PostgreSQL\12\bin
3 set PGHOST=localhost
4 set PGPORT=5432
5 set CITYDB=cdb4_28992
6 set PGUSER=postgres
7 ::
```

A large red curly brace on the right side of the code indicates that lines 2 through 6 should be adapted to specific database connection parameters. A red callout bubble points to this brace with the text "Adapt the file using your database connection parameters". Below the brace, another red callout bubble points to the end of the file with the text "When you are done, save the file." A list of notes below the file explains the variables:

- The **PGBIN** variable contains the path to the psql executable (e.g. psql.exe). Depending on your PostgreSQL installation, it could be in other (but similar) locations.
- **PGHOST** is the IP address of the PostgreSQL server. If you are using the database on your own computer, you can write "localhost", otherwise you have to write the IP address of the server
- **PGPORT** is the port PostgreSQL is listening to. Generally, it is 5432 (this is the default value).
- **CITYDB** contains the name of the database that you have created before (see slide 6) and that will contain the 3DCityDB tables, e.g. "alderaan"
- **PGUSER** contains the name of the user to connect to the database. On your local machine, you may use postgres. You will be asked the password during the installation process later

At the bottom of the Notepad window, status information is displayed: "Batch file", "length : 335 lines : 30", "Ln : 16 Col : 1 Sel : 0 | 0", "Windows (CR LF)", "UTF-8", and "INS".

Create tables and other database objects

Find out the EPSG codes that apply to your city/region. Here some examples:

Software required

Software install

Database setup

- Database connection

- Database creation

- **Create tables etc.**

- Check via PgAdmin

Imp/Exp connection

Additional schemas

ADE plug-ins

- **Netherlands**

- Horizontal datum EPSG: 28992
- Vertical datum EPSG: 5109
- (Will automatically create the GMLSrsName: **urn:ogc:def:crs,crs:EPSG::28992,crs:EPSG:5109**)

- **Trento (Italy)**

- Horizontal datum EPSG: 25832
- Vertical datum EPSG: 5214
- (Will automatically create the GMLSrsName: **urn:ogc:def:crs,crs:EPSG::25832,crs:EPSG::5214**)

- **Vienna (Austria)**

- Horizontal datum EPSG: 31256
- Vertical datum EPSG: 1267
- (Will automatically create the GMLSrsName: **urn:ogc:def:crs,crs:EPSG::31256,crs:EPSG::1267**)

Create tables and other database objects

- Run the batch file CREATE_DB and set the EPSG codes for horizontal and vertical datum, as shown in the image here

```
C:\WINDOWS\system32\cmd.exe

3D City Database - The Open Source CityGML Database

#####
Welcome to the 3DCityDB Setup Script. This script will guide you through the process
of setting up a 3DCityDB instance. Please follow the instructions of the script.
Enter the required parameters when prompted and press ENTER to confirm.
Just press ENTER to use the default values.

Documentation and help:
  3DCityDB website:  https://www.3dcitydb.org
  3DCityDB on GitHub: https://github.com/3dcitydb

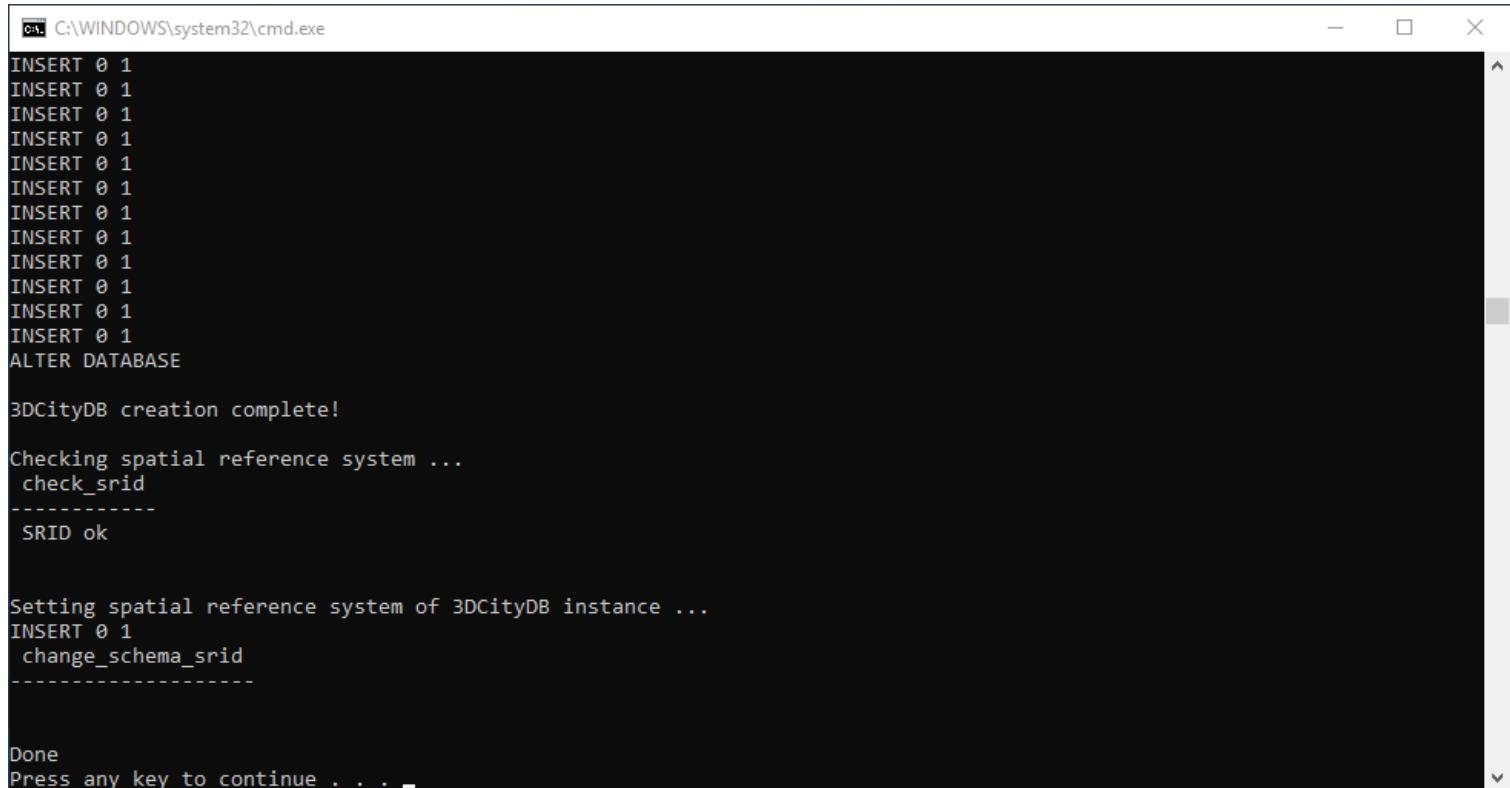

Having problems or need support?
  Please file an issue here:
  https://github.com/3dcitydb/3dcitydb/issues

#####
Please enter a valid SRID (e.g., EPSG code of the CRS to be used).
(SRID must be an integer greater than zero): 28992 ←
Please enter the EPSG code of the height system (use 0 if unknown or '28992' is already 3D).
(default HEIGHT_EPSG=0): 5109 ←
```

- Then press enter, the **GMLRSNAME** variable will be automatically generated (accept the proposed value) and the install script will start and install all tables etc.

Create tables and other database objects

- Upon successful installation, you should get something like this

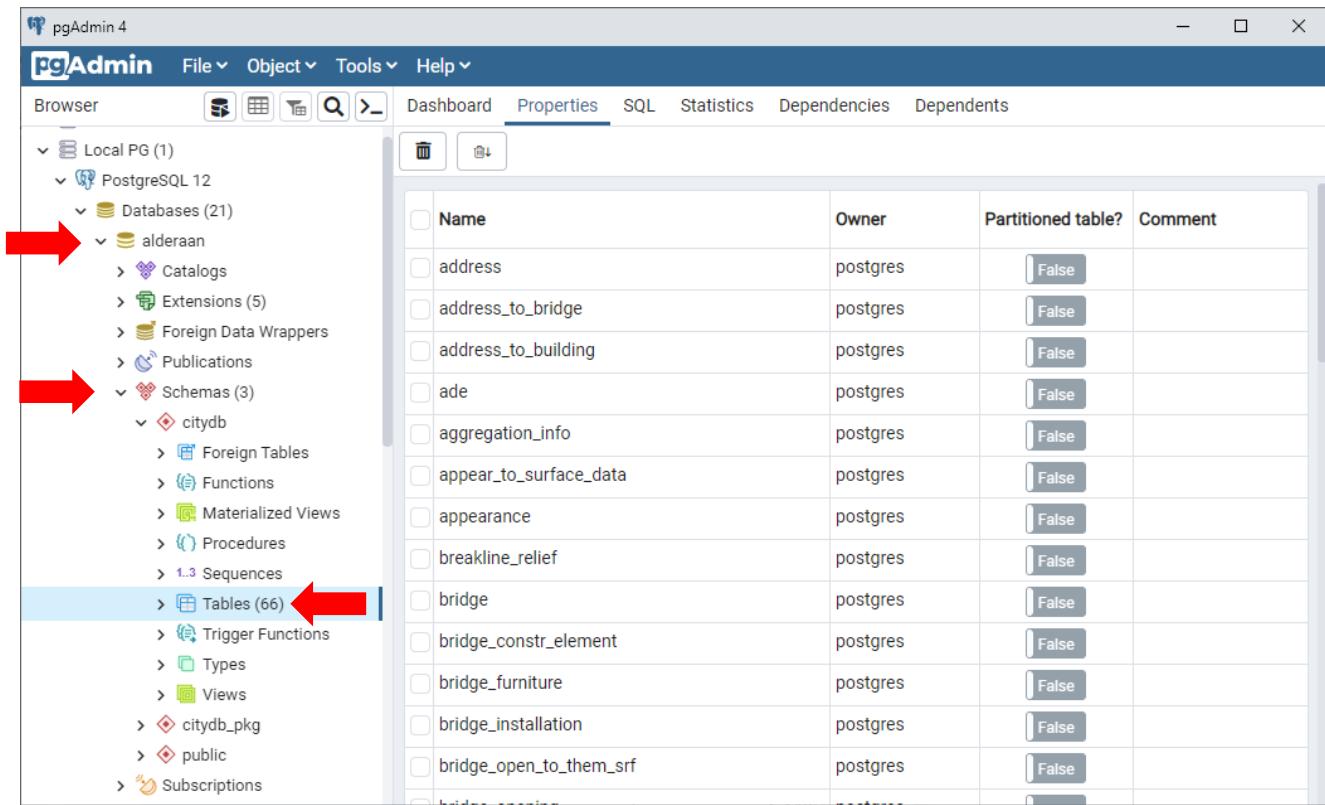

The screenshot shows a Windows Command Prompt window titled "cmd C:\WINDOWS\system32\cmd.exe". The window displays the following text output:

```
INSERT 0 1
ALTER DATABASE
3DCityDB creation complete!
Checking spatial reference system ...
check_srid
-----
SRID ok

Setting spatial reference system of 3DCityDB instance ...
INSERT 0 1
change_schema_srid
-----
Done
Press any key to continue . . .
```

Check via PgAdmin

- Open PgAdmin and check that the **citydb** and **citydb_pkg** schemas are there. The **citydb** schema should contain 66 tables

Overview

Install required
software

Set up the
database

Connect to the
database via the
Importer/Exporter

Add additional
database schemas
(Optional)

Install ADE plug-ins
(Optional)

Connecting to the database via Importer/Exporter

- AFTER you have successfully installed PostgreSQL, you can access the database server via PgAdmin

ALTERNATIVELY

- You do not have PostgreSQL installed on your own computer, but you know the connection parameters to connect to a remote server
- In both cases, you will need information about:
 - Server name or IP address ("localhost" if it is on your computer)
 - Database name (generally "postgres" if it is on your computer)
 - Port (generally 5432 if it is on your computer)
 - Username, Password (e.g. the ones created before if it is on your computer)

Software required
Software install

Database setup

- Database connection
- Database creation
- Create tables etc.
- Check via PgAdmin

Imp/Exp

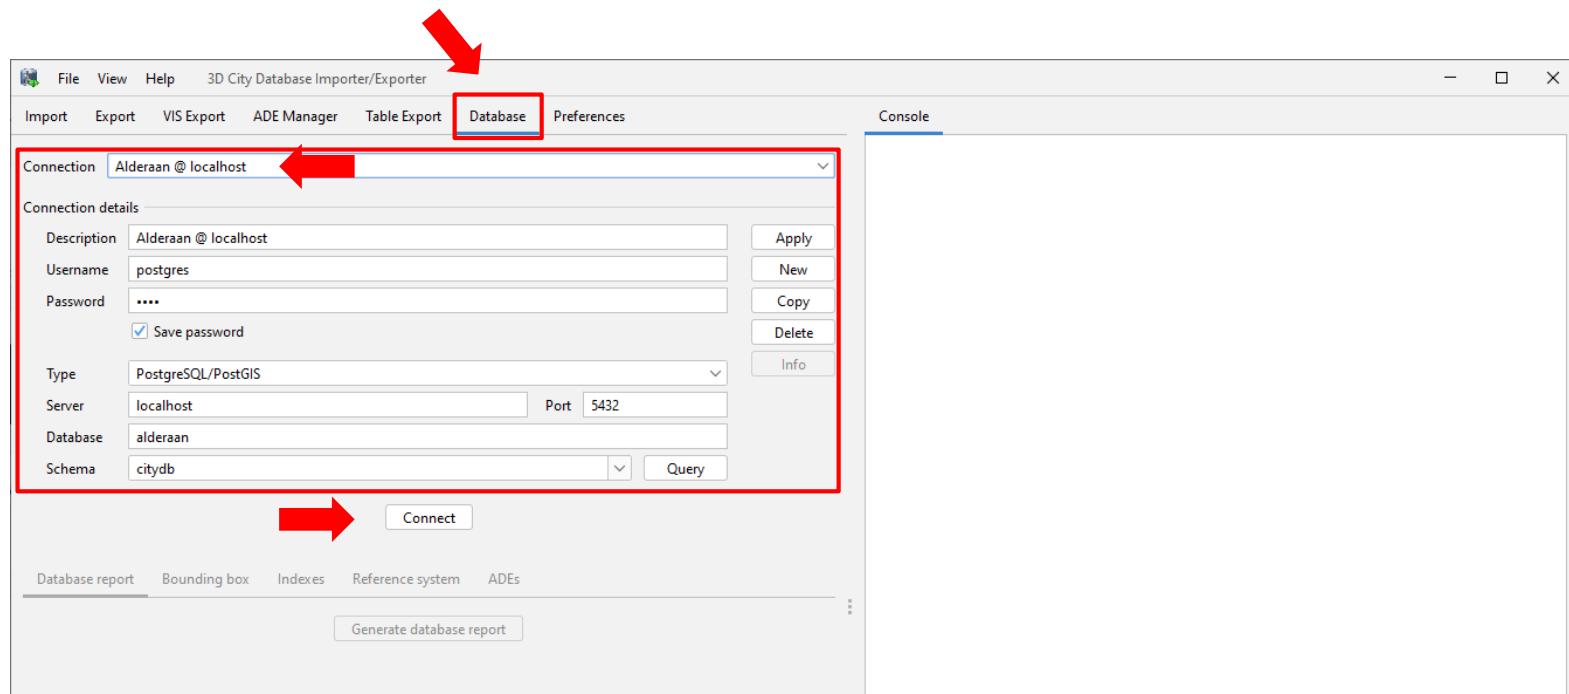

connection

Additional schemas

ADE plug-ins

Connecting to the database via Importer/Exporter

- Launch the 3DCityDB Importer/Exporter, select the "Database" tab
 - The Description field contains a simple string to identify the connection
 - Fill out the remaining fields with the connection parameters
 - Click on Connect

Connecting to the database via Importer/Exporter

- Launch the 3DCityDB Importer/Exporter, select the "Database" tab
 - Upon successful connection, you will see the notification in the console

Software required

Software install

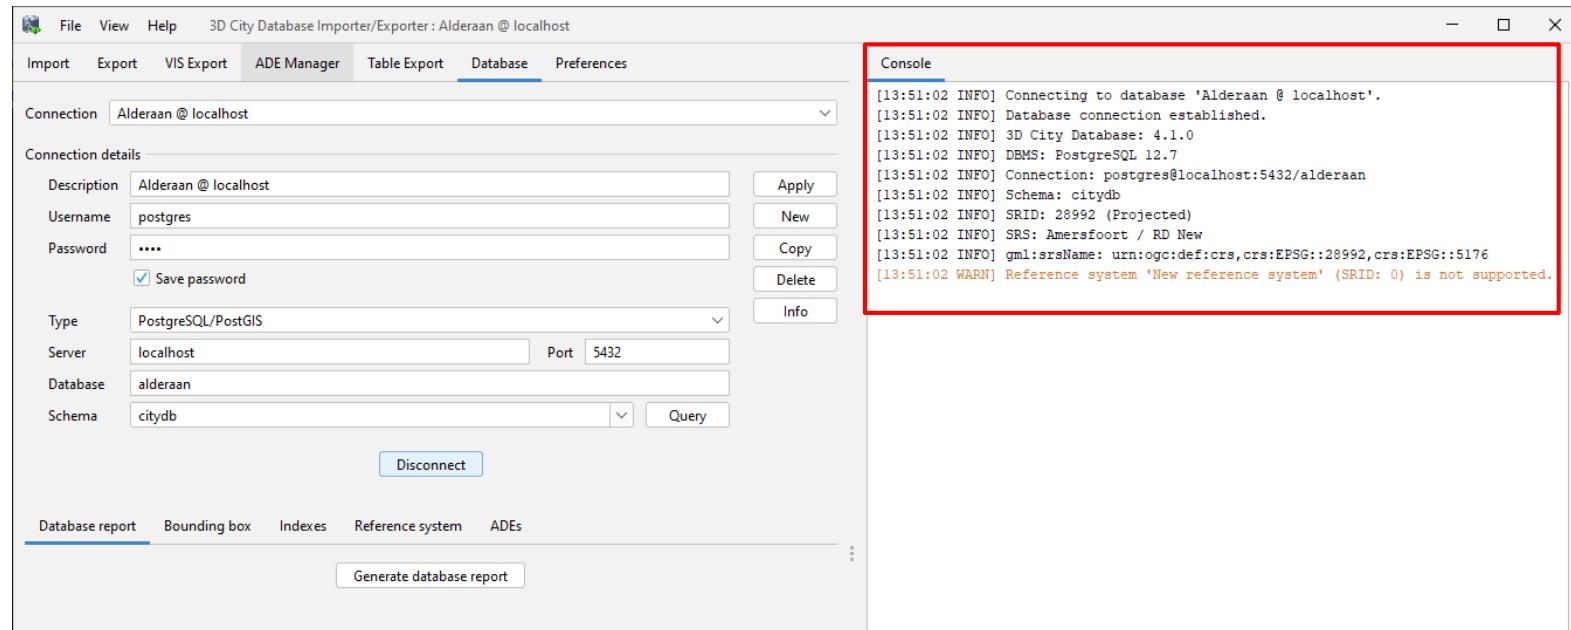

Database setup

- Database connection
- Database creation
- Create tables etc.
- Check via PgAdmin

**Imp/Exp
connection**

Additional schemas

ADE plug-ins

Connecting to the database via Importer/Exporter

- Launch the 3DCityDB Importer/Exporter, select the "Database" tab
 - You can optionally also **Generate a database report**
 - If starting from an empty database, it will simply show that all tables are empty! ☺

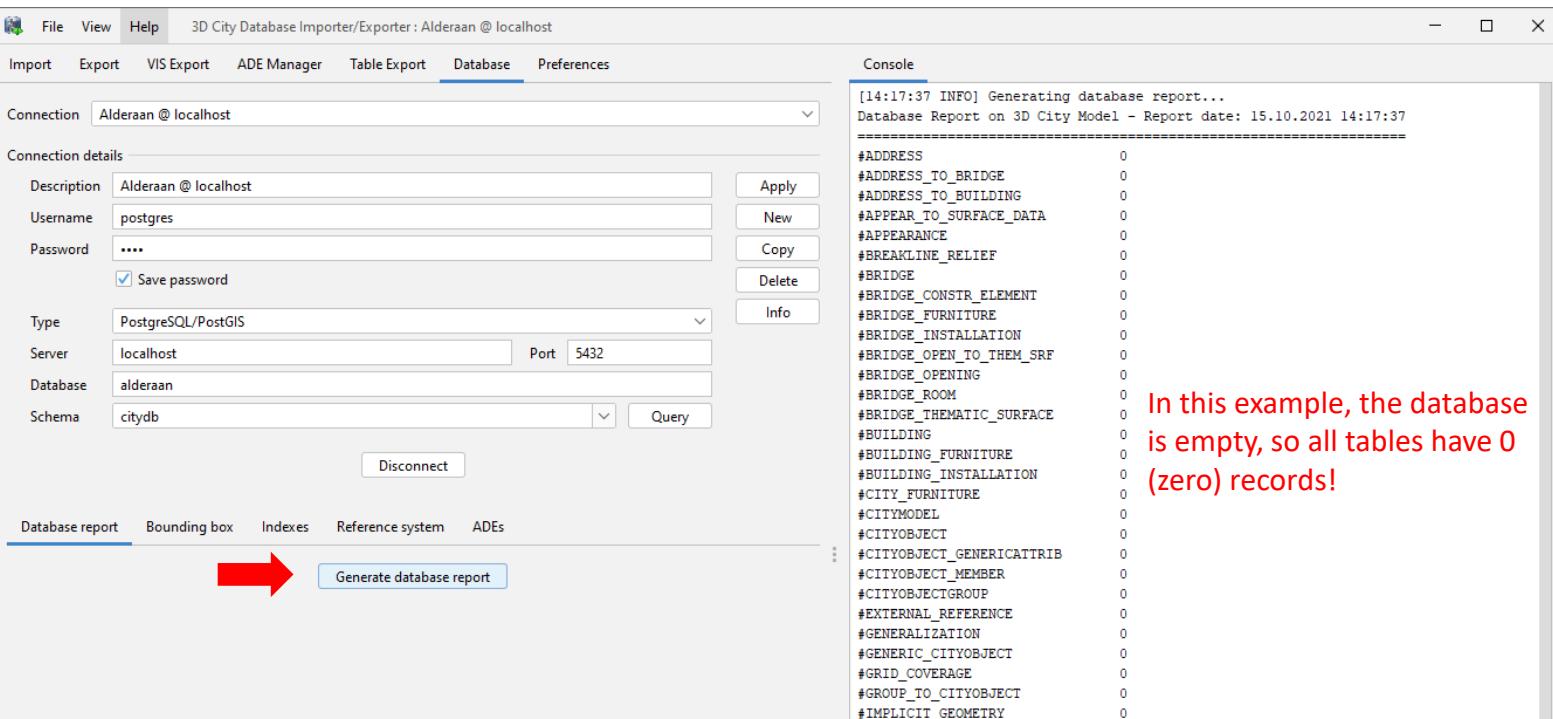

Software required
Software install
Database setup

- Database connection
- Database creation
- Create tables etc.
- Check via PgAdmin

Imp/Exp connection

Additional schemas

ADE plug-ins

The screenshot shows the application window with the "Database" tab selected. On the left, the "Connection" dropdown is set to "Alderaan @ localhost". Below it, the "Connection details" section shows the following fields: Description ("Alderaan @ localhost"), Username ("postgres"), Password ("...."), Save password checked, Type ("PostgreSQL/PostGIS"), Server ("localhost"), Port ("5432"), Database ("alderaan"), and Schema ("citydb"). A red arrow points to the "Generate database report" button at the bottom of the left panel. The right panel is titled "Console" and displays a database report. The report output is as follows:

```
[14:17:37 INFO] Generating database report...
Database Report on 3D City Model - Report date: 15.10.2021 14:17:37
=====
#ADDRESS 0
#ADDRESS_TO_BRIDGE 0
#ADDRESS_TO_BUILDING 0
#APPEAR_TO_SURFACE_DATA 0
#APPEARANCE 0
#BREAKLINE_RELIEF 0
#BRIDGE 0
#BRIDGE_CONSTR_ELEMENT 0
#BRIDGE_FURNITURE 0
#BRIDGE_INSTALLATION 0
#BRIDGE_OPEN_TO_THEME_SRF 0
#BRIDGE_OPENING 0
#BRIDGE_ROOM 0
#BRIDGE_THEMATIC_SURFACE 0
#BUILDING 0
#BUILDING_FURNITURE 0
#BUILDING_INSTALLATION 0
#CITY_FURNITURE 0
#CITYMODEL 0
#CITYOBJECT 0
#CITYOBJECT_GENERICATTRIB 0
#CITYOBJECT_MEMBER 0
#CITYOBJECTGROUP 0
#EXTERNAL_REFERENCE 0
#GENERALIZATION 0
#GENERIC_CITYOBJECT 0
#GRID_COVERAGE 0

#IMPLICIT_GEOMETRY 0
```

In this example, the database is empty, so all tables have 0 (zero) records!

Overview

Install required
software

Set up the
database

Connect to the
database via the
Importer/Exporter

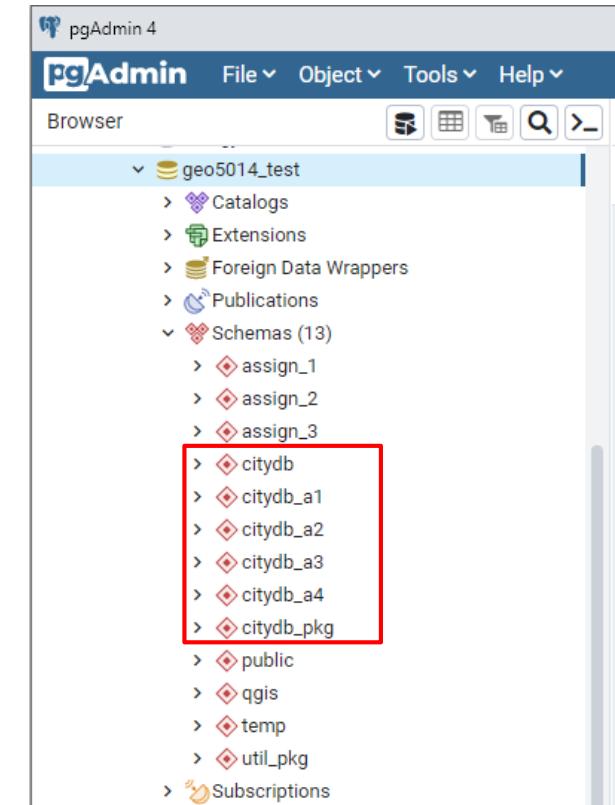

Add additional
database schemas
(Optional)

Install ADE plug-ins
(Optional)

3D City Database: additional schemas

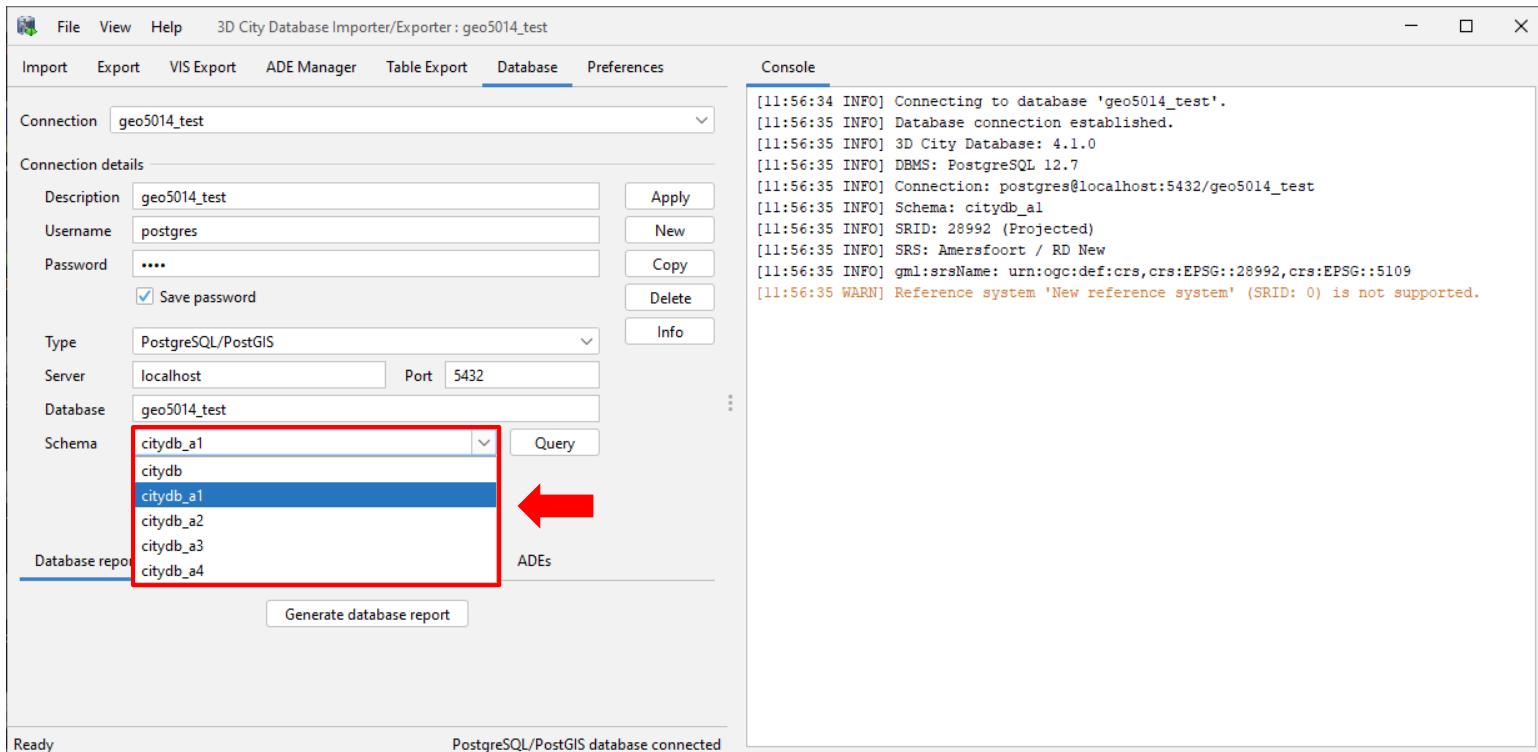

Software required
Software install
Database setup
• Database connection
• Database creation
• Create tables etc.
• Check via PgAdmin
Imp/Exp connection
Additional schemas
ADE plug-ins

- **To add additional schemas** (OPTIONAL, besides the default citydb):
 - Check the connection parameters in file **CONNECTION_DETAILS.bat** (should be the same as before)
 - Run the **CREATE_SCHEMA** script. You will be requested to enter the name of the additional schema (e.g. "citydb_a1", or "scenario_1", etc.)
 - You can choose any name you want, but try to use only small letters
 - The new schema and its contents will be added automatically. The new schema will have the same CRS of the citydb schema
 - You can repeat these steps and add more schemas to the same database. At the end you will have
 - The citydb schema and n additional schemas
 - Only one citydb_pkg schema

3D City Database: additional schemas

- When using the Importer/Exporter, you can choose which schema to use to import/export data from the GUI.

Software required
Software install

Database setup

- Database connection

ADE plug-in installation

Please note: These slides refer to the Energy ADE plug-in for the 3DCityDB. However, a similar procedure can be followed for other ADE plug-ins.

- 1) Download the **energy-ade-citydb** extension for the Importer/Exporter
 - <https://github.com/3dcitydb/energy-ade-citydb/releases/>
- 2) Unzip it in folder ade-extensions of your 3DCityDB install path

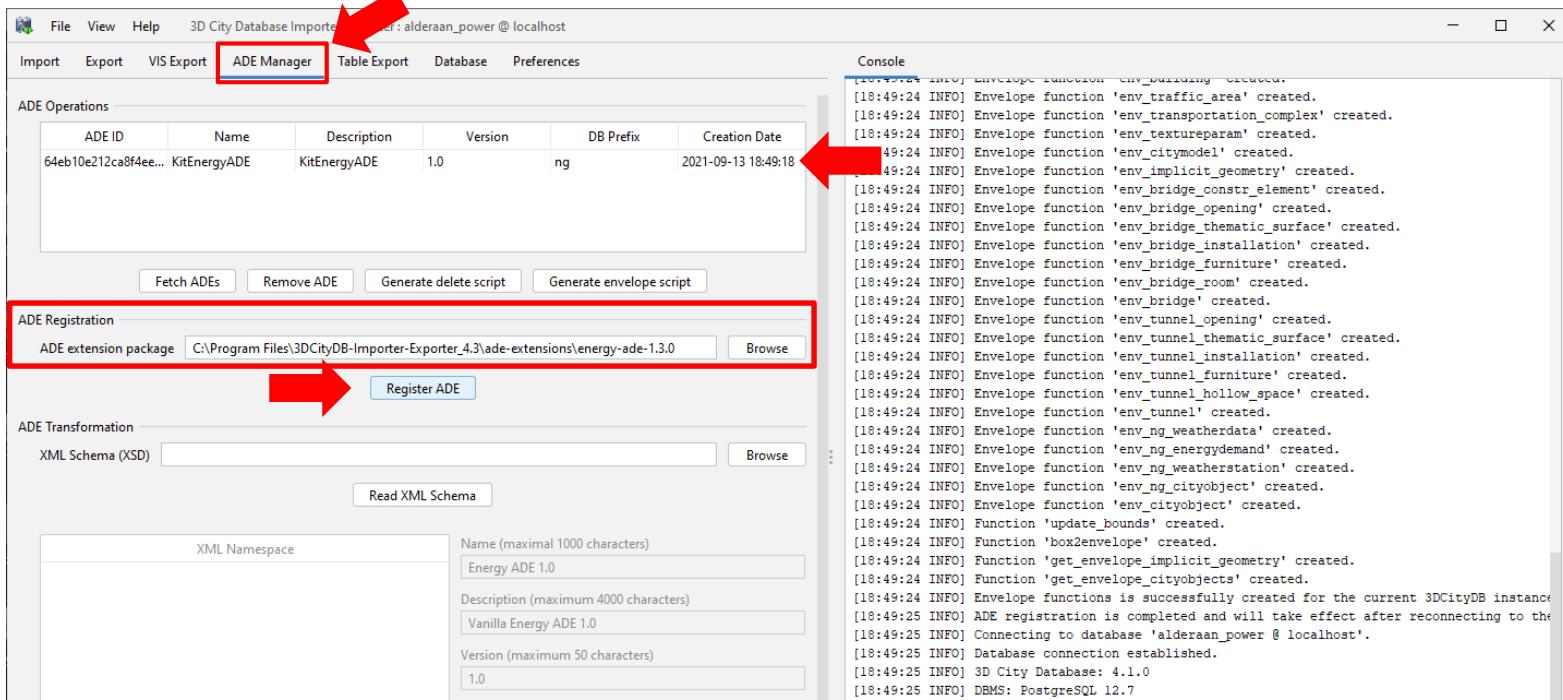

Detailed instructions available on-line

- <https://3dcitydb-docs.readthedocs.io/en/latest/plugins/ade-manager/index.html>

ADE plugin installation

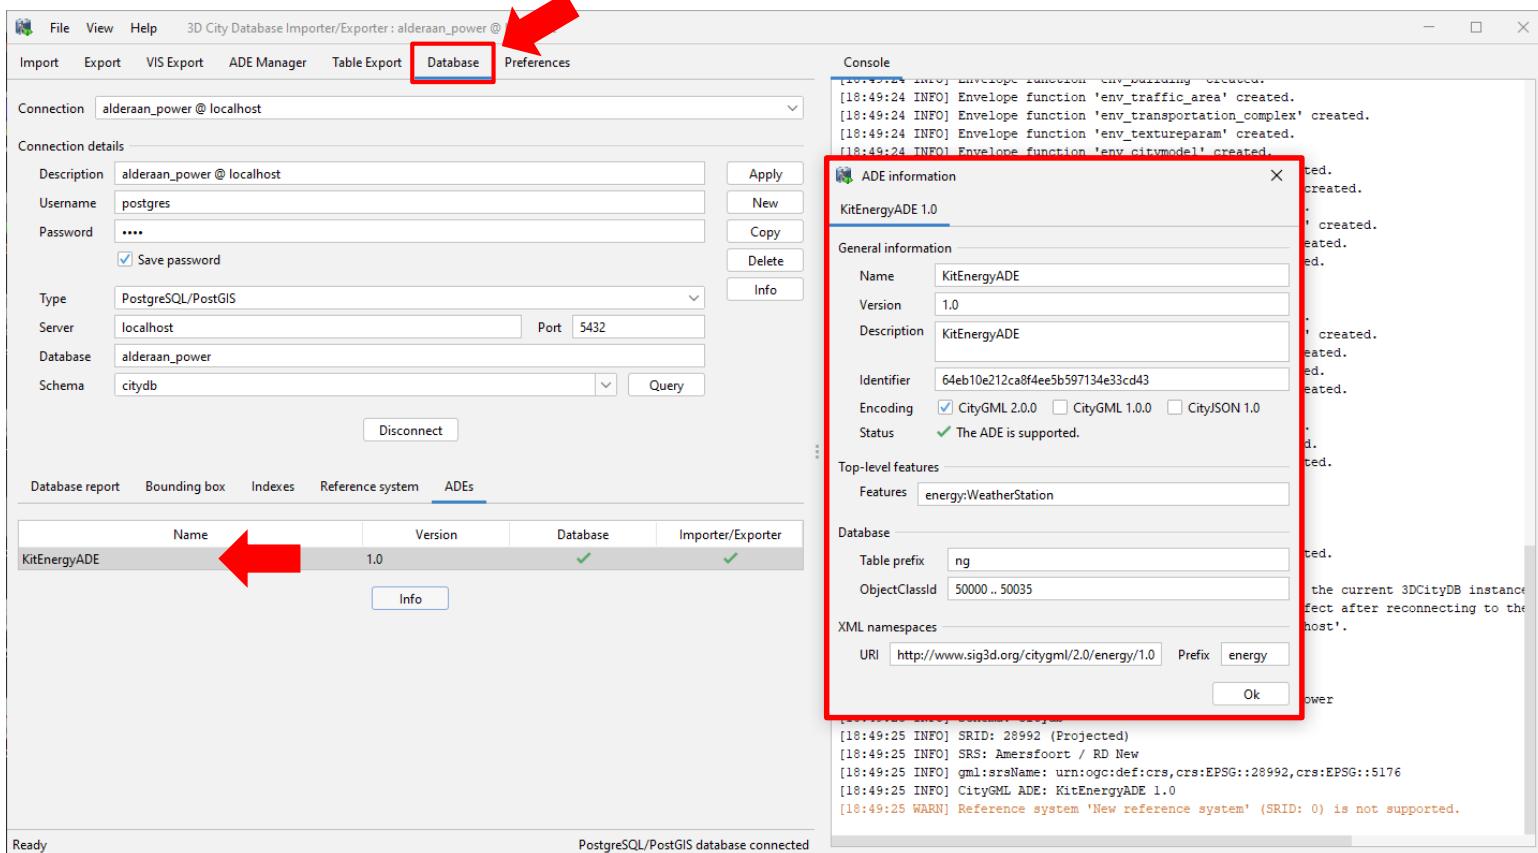

- From the Importer/Exporter, connect to an existing 3DCityDB instance
 - In the "ADE extension package" add the path to the plug-in folder unzipped before
 - "Register" the ADE from the ADE Manager tab
 - The ADE will be added to the ADE list (and all tables, etc. will be added to the current schema)

ADE plugin installation

- Check also in the database tab the ADEs properties

Software required
 Software install
 Database setup
 Imp/Exp connection

ADE plug-ins
 • Installation
 • Data import
 • Data export

The screenshot shows the 'ADE Manager' tab selected in the top navigation bar. A red arrow points to the 'Database' tab in the top navigation bar. Another red arrow points to the 'ADEs' tab in the bottom navigation bar. The main panel displays a table of ADEs:

Name	Version	Database	Importer/Exporter
KitEnergyADE	1.0	✓	✓

An 'Info' button is located below the table. To the right, a detailed 'ADE information' dialog box is open for the 'KitEnergyADE 1.0' entry, also highlighted with a red box. The dialog contains the following information:

- General information**: Name (KitEnergyADE), Version (1.0), Description (KitEnergyADE), Identifier (64eb10e212ca8f4ee5b597134e33cd43), Encoding (CityGML 2.0.0 checked, CityGML 1.0.0 and CityJSON 1.0 unchecked), Status (The ADE is supported checked).
- Top-level features**: Features (energy:WeatherStation).
- Database**: Table prefix (ng), ObjectClassId (50000 .. 50035).
- XML namespaces**: URI (<http://www.sig3d.org/citygml/2.0/energy/1.0>), Prefix (energy).

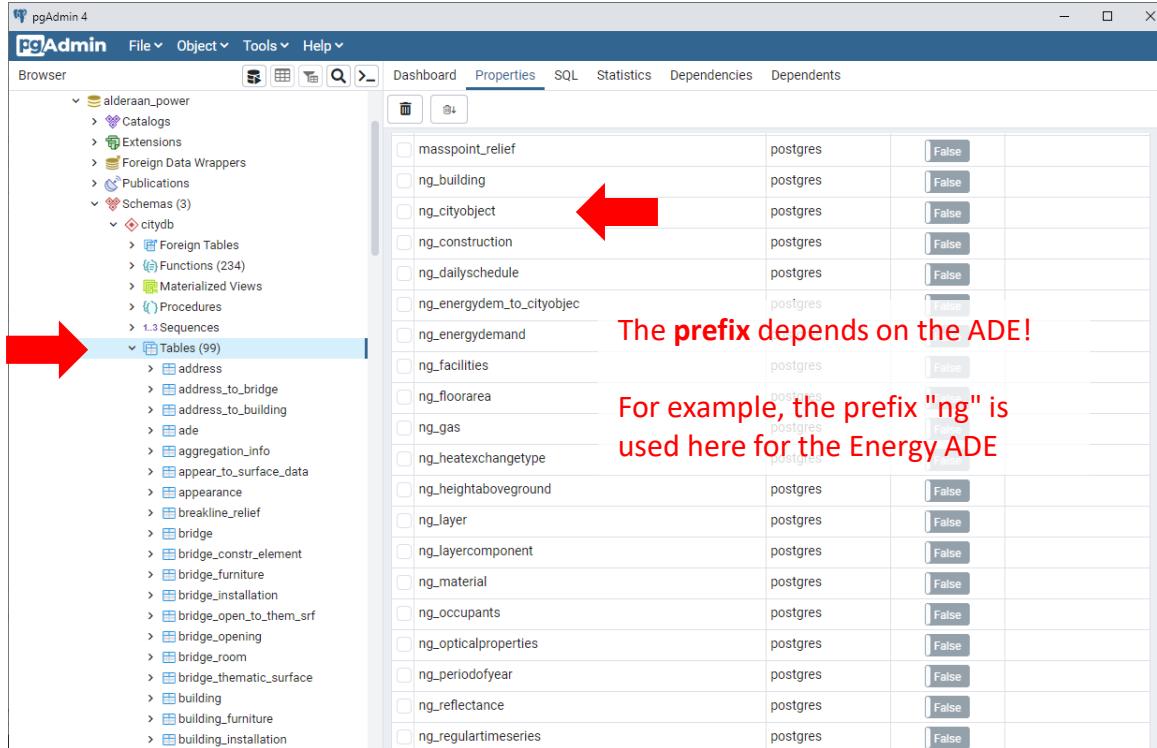

The 'Console' window at the bottom shows several log messages indicating the creation of various envelope functions and the status of the ADE.

ADE plugin installation

- Check in PgAdmin: new tables (and functions) with prefix "ng" have been added

Software required
Software install
Database setup
Imp/Exp connection
Additional schemas
ADE plug-ins

- Installation
- Data import
- Data export

The screenshot shows the pgAdmin 4 interface with the 'Properties' tab selected. On the left, a tree view displays database objects: Catalogs, Extensions, Foreign Data Wrappers, Publications, Schemas (3), and Tables (99). A red arrow points to the 'Tables (99)' node. On the right, a list view shows various tables, with another red arrow pointing to the 'ng_cityobject' table. Below the list, two red text annotations provide context: 'The prefix depends on the ADE!' and 'For example, the prefix "ng" is used here for the Energy ADE'.

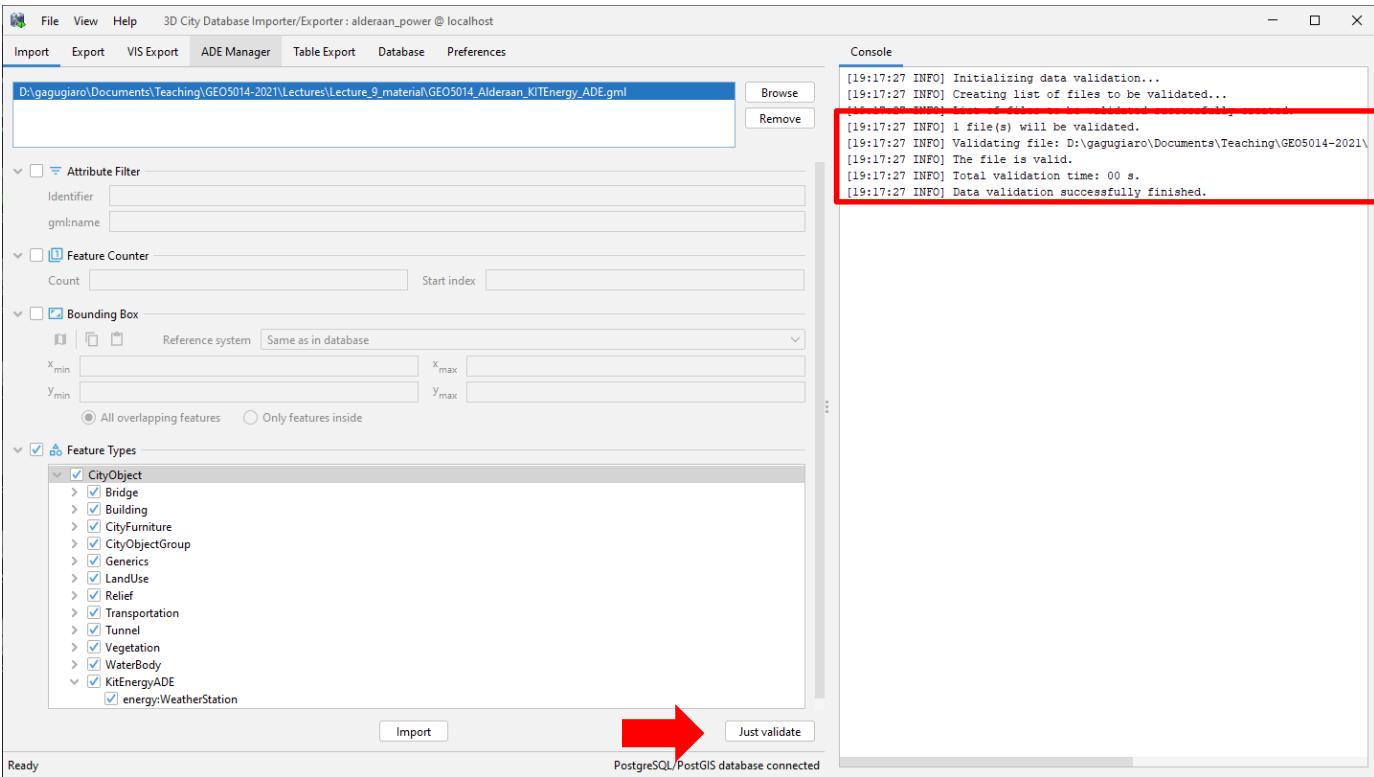

Table Name	Type	Owner	Not Null
masspoint_relief		postgres	False
ng_building		postgres	False
ng_cityobject		postgres	False
ng_construction		postgres	False
ng_dailyschedule		postgres	False
ng_energydem_to_cityobject		postgres	False
ng_energydemand		postgres	False
ng_facilities		postgres	False
